## Smarter Water Management Starts Here

**Discover Cistermiser's trusted range of innovative, water-saving solutions designed for performance, efficiency, and easy installation.**

Cistermiser is a leading UK designer and manufacturer of innovative water and energy-saving solutions for commercial washrooms.

With decades of expertise, we help organisations reduce water consumption, cut costs, and improve sustainability without compromising performance.

Our comprehensive product range includes **Urinal Flushing, Toilet Flushing, Infrared Taps, Shower Panels, Washroom Controls** and **Limescale Prevention**. Each product has been designed for reliability, ease of installation, and long-term efficiency.

Trusted by merchants, installers, and facilities professionals alike, Cistermiser provides smart solutions that work in real-world environments.

## Cistermiser Product Range

### Urinal Flushing

Cistermiser's Urinal Flushing solutions are designed to eliminate wasteful continuous flushing, helping organisations achieve significant water savings while maintaining the highest standards of washroom hygiene. Our range of hydraulic and sensor-controlled products ensures urinals flush only when needed, reducing costs, conserving resources, and supporting sustainability goals. Trusted across commercial, leisure, and public sector washrooms, Cistermiser sets the standard for smart and reliable urinal management.

**Infrared Control Valve IRC®** - The Infrared Control Valve IRC® is an intelligent water management system that revolutionises urinal efficiency in commercial washrooms. Using advanced motion-sensing infrared technology, the valve only supplies water to the urinal cistern when users are actually present, eliminating unnecessary flushing cycles.

**Direct Flush Valve** - The Direct Flush Valve is a cutting-edge infrared sensor-controlled urinal flushing system that connects directly to the mains water supply. This intelligent valve delivers precise, hygienic flushing for individual urinals while eliminating the complexity and space requirements of traditional cistern-based systems.

**Hydraulic Valve** - The Hydraulic Valve is a water-efficient automatic flush control system designed specifically for urinal cisterns in commercial washrooms. This innovative valve uses a simple yet effective hydraulic mechanism that intelligently responds to actual washroom usage, ensuring water is only used when the facility is being accessed by users. Available for standard or low water pressure.

## Cistermiser Product Range

### Toilet Flushing

Cistermiser's Toilet Flushing solutions combine reliability, efficiency, and hygiene to deliver smarter washroom management. Designed to minimise water wastage without compromising user experience, our range of hands-free and controlled flush systems ensures toilets operate effectively while supporting sustainability and compliance. With robust engineering and proven performance, Cistermiser helps organisations across commercial, leisure, and public sector settings achieve long-term water and cost savings.

**EasyflushEVO** - The Easyflush EVO is an advanced toilet flushing valve that combines hands-free infrared sensor operation with innovative water-saving features. Designed to deliver efficient and hygienic flushing for commercial and public washrooms, it is WRAS-approved and supports sustainability without compromising on performance.

**Easyflush Direct Valve** - The Easyflush Direct Valve is an innovative toilet flushing solution that delivers hygiene, performance, and water efficiency without the need for a traditional cistern. By connecting directly to the mains water supply, this electronically controlled valve provides precise and reliable flushing while freeing up valuable wall space. Ideal for high-traffic washrooms, it is the perfect choice for architects and specifiers seeking sleek, sustainable solutions.

### Built for commercial environments

- ✓ Robust and reliable
- ✓ Easy to install and maintain
- ✓ Designed for long service life
- ✓ Suitable for new build and retrofit projects
- ✓ Supports water, energy and carbon reduction goals

## Cistermiser Product Range

### Infrared Taps

**Vecta+ Sensor Tap** - The Vecta+ Sensor Tap is a stylish and hygienic solution for modern washrooms, combining sleek design with intelligent water-saving functionality. This deck-mounted tap uses infrared sensor technology to deliver water only when needed, helping to conserve water and reduce the spread of germs. Durable, vandal-resistant, and easy to install, it's ideal for a wide range of commercial and public washroom environments.

**Vecta+ Sensor Mixer Taps** - The Vecta+ Sensor Mixer Tap offers an elegant, hands-free solution for delivering pre-mixed warm water in commercial washrooms. Combining infrared technology with precise temperature control, it ensures a hygienic and comfortable user experience. Designed for durability and efficiency, this deck-mounted tap is perfect for high-traffic environments where cleanliness, safety, and sustainability are top priorities.

**Vecta+ Sensor Spout** - The Vecta+ Sensor Spout is a minimalist, wall-mounted spout that delivers hands-free, hygienic water flow through reliable infrared technology. Designed to blend seamlessly into contemporary washroom environments, it offers a discreet yet highly effective solution for commercial and public spaces. Ideal for pairing with concealed controls and mixing valves, it provides flexibility in design and installation without compromising on performance.

**Novatap** - The Novatap is a contemporary, deck-mounted infrared sensor tap that delivers a reliable and hygienic handwashing experience. Designed for durability and ease of use, it's ideal for public and commercial washrooms where water conservation and hands-free operation are essential. With a polished chrome finish and vandal-resistant build, the Novatap combines modern aesthetics with long-term performance.

## Cistermiser Product Range

### Shower Panels

Cistermiser's Shower Control solutions are designed to save water, enhance hygiene, and deliver reliable performance in busy washroom environments. With sensor-activated and time-controlled features, our showers provide users with a convenient experience while ensuring operators maintain control over consumption and compliance. Trusted across leisure, education, healthcare, and commercial facilities, Cistermiser showers combine durability with smart technology to support long-term sustainability goals.

**Vecta+ Sensor Shower Panel** - The Vecta+ Sensor Shower Panel is a complete, pre-plumbed, surface-mounted shower solution featuring hands-free infrared activation for maximum hygiene and water efficiency. Designed for easy installation and long-term durability, this vandal-resistant unit is ideal for high-traffic commercial, leisure, and institutional environments. The panel includes an integral thermostatic mixing valve to deliver safe, comfortable water temperature every time.

**Vecta+ Mechanical Shower Panel** - The Vecta+ Mechanical Shower Panel is a robust, surface-mounted, pre-plumbed showering solution designed for simplicity, durability, and water efficiency. Featuring a mechanical push-button control and an integral thermostatic mixing valve, it delivers safe and timed water flow without the need for electrical power. Its sleek stainless steel finish and vandal-resistant design make it ideal for high-use environments where reliability and ease of maintenance are key.

### Sustainability in action

- ✓ Reduced water consumption
- ✓ Lower hot water usage = reduced energy demand
- ✓ Reduced carbon impact
- ✓ Longer product lifespan and reduced maintenance
- ✓ Supports ESG and sustainability strategies

## Cistermiser Product Range

### Washroom Controls

Cistermiser's Washroom Control solutions provide intelligent, centralised management of water and energy usage across multiple facilities. From occupancy-sensing systems to automatic shut-off controls, our products help operators reduce waste, improve hygiene, and maintain compliance with ease. Ideal for high-traffic environments such as schools, leisure centres, healthcare, and commercial buildings, Cistermiser washroom controls deliver efficiency, reliability, and long-term sustainability.

**Sensazone** - Sensazone is an advanced washroom control system that uses PIR (passive infrared) sensors to manage water, lighting, and ventilation automatically. By controlling services only when the washroom is occupied, Sensazone helps facilities reduce energy costs, save water, and minimise the risk of leaks and flooding. With its discreet design and intelligent operation, it provides a reliable and sustainable solution for both new build and retrofit projects.

### Sensazone in action: The World of Beatrix Potter, Cumbria

Nestled on the banks of Lake Windermere in Bowness-on-Windermere, The World of Beatrix Potter welcomes up to 180,000 visitors each year. When a full washroom refurbishment was needed to keep pace with growing footfall, washroom specialist Aaztec Cubicles specified the Cistermiser Sensazone system — delivering a solution that was visually impressive, easy to maintain, and highly efficient. Using infrared sensors, Sensazone intelligently controls water supply, lighting and extractor fans, cutting consumption only to periods of actual use. Solenoid valves shut off the water supply after a pre-set vacant period, eliminating the risk of flooding or wastage, while the shutdown facility ensures lighting and fans are never left running unnecessarily. The result? A BREEAM-compatible, Water Regulations-compliant washroom that the museum's Operations Manager described as "beyond exceptional" and a visitor experience to match.

### Limescale Prevention

**Combimate**

Cistermiser's Combimate is a proven solution for preventing limescale build-up and protecting appliances, pipework, and heating systems. Using Combiphos, a food-grade polyphosphate, Combimate treats incoming water to prevent scale forming in hard water areas and to reduce corrosion in soft water regions. Simple to install and maintain, it helps extend the life of household and commercial systems, improve efficiency, and deliver long-term cost savings. Trusted for over 30 years, Combimate remains the reliable choice for limescale prevention.

**Combimate** - Combimate is a whole-house limescale prevention device designed to protect domestic appliances, plumbing systems, and boilers from the damaging effects of hard water. Compact and easy to install, it uses Combiphos, a 100% food-grade natural crystal, to prevent limescale build-up and soften the impact of aggressive water salts. By safeguarding pipework and appliances, Combimate helps extend system life, reduce energy consumption, and lower maintenance costs.

**Combiphos Refill Pack** - The Combiphos Refill Pack contains food-grade natural crystals specifically designed for use with the Combimate limescale prevention system. Refilling annually ensures the Combimate continues to deliver effective protection against limescale build-up throughout the home, keeping plumbing systems and appliances running efficiently.

### Combimate: Features & Benefits

- ✓ Guaranteed Limescale Prevention
- ✓ Easy to install
- ✓ Prevents hard scale forming on taps and kettles
- ✓ Shower heads and screens are easily cleaned
- ✓ Piece of mind that your appliances are protected

## Why Cistermiser

### The Water Saving Experts

Cistermiser is trusted by merchants across the UK for one simple reason: our products deliver proven water and cost savings that your customers can rely on. As The Water Saving Experts, we combine innovative design, industry-leading reliability, and strong brand recognition to help you stock solutions that are easy to specify, install, and sell. With growing demand for sustainable building solutions, Cistermiser gives you a product range that not only meets today's efficiency standards but adds real value to every project. Backed by expert support, consistent availability, and a reputation built over decades, we make it easy for you to do business with confidence.

#### Stock smarter. Sell with confidence.
